

Network.GetIpAddress (deprecated)

Method	GetIpAddress (deprecated)
Module	Network
Library	Core
Action	Gets IP addresses assigned to the machine.
Parameters	(None)
Return values	<p>IpAddress (string): The IP address of the adapter</p> <p>IpVersion (string): IPv4/IPv6</p> <p>MacAddress (string): Physical address. Not available on Android.</p> <p>AdapterName (string): Description of the adapter the IP address is assigned to. Not available on Android.</p> <p>AdapterType (string): Type of the adapter. For Windows, 'friendly' strings returned are based off IP_ADAPTER_INFO type defines. Not available on Android.</p> <p>SubnetMask (string): Subnet mask for the IP address. This is only supplied for IPv4 addresses. It is implicit in an IPv6 address.. Not available on Android.</p>
Example	<pre>Network.GetIpAddress();</pre>
Platforms	<ul style="list-style-type: none">Windows
Notes	The method name is misleading because more than one address may be returned. It has been deprecated in 3.1. Please use GetIpAddresses instead.
