

Security.ModifyQuarantineWhitelist

Method	ModifyQuarantineWhitelist
Module	Security
Library	Security
Action	<p>Allows connections from additional specified IP addresses to an already-quarantined device. This allows security tools other than Tachyon to diagnose and protect the device.</p> <div style="border: 1px solid red; padding: 5px;"><p> Ensure you understand the impact of using the Quarantine feature. See Security.QuarantineDevice for important information about quarantine.</p><p>It is an error, and the method will fail, if the device is not already in a quarantined state.</p></div>
Parameters	AddedIpAddresses (string): A comma-separated list of IPv4 addresses. Allow connections from these devices as well as those already in the quarantine whitelist.
Return values	Status (string): The quarantine status. If the response is a success, this will be <code>Quarantined</code> .
Example	<p>Allow connections from device at IP address 10.10.99.150 in addition to those already allowed.</p> <pre>Security.ModifyQuarantineWhitelist(AddedIpAddresses: "10.10.99.150");</pre>
Platforms	<ul style="list-style-type: none">Windows
Notes	<ul style="list-style-type: none">Available from v5.1.This is not available on Windows XP.
