

# Configuring AppClarity

## Summary

How to configure AppClarity.

## In this section...

### [Tachyon roles for configuring AppClarity](#)

Tachyon and AppClarity roles needed to successfully configure AppClarity.

### [Connectors page](#)

Tachyon 5.0 uses connectors to connect to other 1E and third-party systems. In addition to the connectors provided with Tachyon, the following entitlement connectors are provided by AppClarity:

- [AppClarity v5.2 connector](#) — Exports entitlements from an AppClarity 5.2 database into a TSV file, which can then be reviewed and imported into .
- [Entitlement .tsv connector](#) — Uploads entitlements from a folder containing one or more tab or comma separated value file(s).

### [Repositories page](#)

How to configure repositories for use with AppClarity.

### [SCCM Uninstall Provider](#)

Enable to the SCCM Uninstall provider to support the use of the SCCM custom Reclaim feature.

### [Deploying Software Reclaimer](#)

The Software Reclaimer is an executable that is run on Windows clients and is responsible for implementing reclaim policies provided by AppClarity. It can be distributed to devices using Configuration Manager.
