

Security.GetQuarantineStatus

Method	GetQuarantineStatus
Module	Security
Library	Security
Action	<p>Gets the current quarantine status of the device.</p> <div style="border: 1px solid red; padding: 5px;"> Ensure you understand the impact of using the Quarantine feature.</div>
Parameters	
Return values	<p>Status (string): The quarantine status. This can be one of four values:</p> <ul style="list-style-type: none">• <code>Quarantined</code>: The device is currently under quarantine• <code>NotQuarantined</code>: The device is not currently under quarantine• <code>UnknownValue</code>: The device may be under quarantine, but persistent storage may be damaged, as some values are unexpected• <code>UnknownNoSPS</code>: The device is unable to read its persistent storage. Quarantine status is unknown, and the device cannot be quarantined (or unquarantined) until persistent storage is available.
Example	<pre>Security.GetQuarantineStatus();</pre>
Platforms	<ul style="list-style-type: none">• Windows
Notes	<ul style="list-style-type: none">• This is not available on Windows XP.• Quarantine requires working persistent storage.<ul style="list-style-type: none">• If persistent storage is removed or corrupted during quarantine, the agent will be unable to revert to an unmodified state.• Upgrading the agent whilst under quarantine is not supported or recommended.
