

Prerequisites

Summary

A list of all the platforms supported by Application Migration and the software required to allow Application Migration to be installed and work correctly.

Because Application Migration is a consumer for the SLA Platform, the list of Supported Platforms for Application Migration is identical to that product.

On this page:

- [Supported Platforms](#)
- [1E Companion Products](#)
- [System Center Configuration Manager connector](#)

The Application Migration Task Sequence step requires PowerShell v4 or greater (included in Windows 8 and later).

The Application Migration step executes in a Configuration Manager OS deployment task sequence after the new OS is installed. If you are deploying Windows 7 images, upgrade PowerShell in the image or install it using a task sequence step before executing the Application Migration step.

Supported Platforms

1E Companion Products

Supported versions of 1E companion products that Application Migration 2.5.200 features depend on.

Products and features that Application Migration depends on		Supported versions of companion products
