

# Verifying

**On this page:**

- [Verify Tachyon Server installation](#)
- [Verify IIS security of the Tachyon web site](#)
- [Verify user rights assignment](#)
- [Verify Tachyon Agent installation](#)
- [Verify Tachyon client-server communications \(stage 1 and 2 instructions\)](#)
- [Verify extended features](#)

## Summary

Basic verification tests that cover a single-server installation of Tachyon Server. These tests should be run in series. They start with basic server checks, then testing agents, and finally using the Verification instructions from the **1E-TachyonPlatform** product pack to do end-to-end tests that confirm all components are working. Depending on the decisions you have made during the design phase of your implementation you may need additional tests to verify your Tachyon implementation.

**i** Please ensure you complete all verification tests. They not only confirm your system is operational, but they also introduce you to concepts and tasks that you will use later when using Tachyon.

To run these tests you need:

1. Tachyon Server installed
2. Remote workstation with a [supported browser](#)
3. The name and password for the **server installation account**
  - a. the AD account must be enabled
  - b. the account may already be assigned to other Tachyon roles either directly or via membership of an AD group role.
4. Two AD User accounts, **Test User 1** and **2**
  - a. must not be existing Tachyon users because they will be assigned specific roles for the purpose of these tests.
  - b. must have email addresses and be able to read emails.
5. The **1E-TachyonPlatform.zip** product pack file containing the Verification instructions, if not already installed. In these tests this file is referred to as the **1E-TachyonPlatform** product pack.
6. At least one test device on which the Tachyon Agent will be installed
7. Tachyon Agent installation source files and configuration details required by your Tachyon implementation

## Verify Tachyon Server installation

To run the following tests you need:

1. Tachyon Server installed
2. The name and password for the **server installation account**, the account must also be enabled

Ref	Test	Expected	Remediation

<b>Tachyon Response</b>	Core (Core and Core Internal)	1E\Tachyon\	Tachyon.CoreAPI.log
	Background Channel (Background)	1E\Tachyon\	Tachyon.BackgroundAPI.log
	Switch(es) (also includes a single Switch Host service)	1E\Tachyon\	Tachyon.Switch_A.log Tachyon.Switch.Host.log

Please refer to [Services and NTFS Security](#) if changing the location of log files.

In this version of Tachyon Server, some installers do not support the LOGPATH property and the logs folder is not configurable during installation.

Each component has a configuration file in the Tachyon Server installation folder structure, which contains log configuration details. Defaults are:

- Filepath %ALLUSERSPROFILE%\1E\<product>\ where product is Tachyon, SLA Platform, and Catalog
- Filename as shown in the table above.
- Maximum size 10MB (2MB for Switch logs).
- 2 rollover files numbered 1 to 2 with the rollover number included as n.log (5 rollover files for Switch logs).
- Date and timestamps are UTC to help troubleshooters synchronise logs on systems in different timezones.

Switch logs have the following names:

- The first Switch installed will typically have a log filename **Tachyon.Switch\_A.log**
- Other Switches on the same server will have different letters appended. The letter is derived from the ID in the SwitchConfiguration table, where the letter is modulo 26 of the ID minus 1, for example ID=2 is A and ID=6 is E.
- The log filename will be unique on a server, but there may be the same named log on a different server.
- A Switch will continue to use the same log, unless the SwitchConfiguration table is modified so that a different ID is used.
- If you see a Tachyon.Switch.log without a letter appended, this is a special case where a Switch cannot find its correct configuration, and has fallen back to using the template \* row which has ID=1. In which case you will need to troubleshoot how that happened.
- Rollover logs have numbers appended, for example Tachyon.Switch\_A.1.log, up to a default maximum of 5.

Tachyon server components use the **log4net RollingFileAppender** class. Details can be found in <http://logging.apache.org/log4net>.

## Verify IIS security of the Tachyon web site

To run the following tests you need:

1. Tachyon Server installed
2. The name and password for the **server installation account**, the account must also be enabled
3. Remote workstation with a [supported browser](#) - using a remote workstation is important because you will get different results if using a local browser,

R ef	Test	Expected	Remediation

TCNI06	<ul style="list-style-type: none"> <li>Change the web browser URL from <b>/Tachyon</b> to <b>/Background</b></li> </ul>	<p>The web browser will respond with <b>You have reached Tachyon background API</b>. (IE will download as a JSON file, other browsers will display a response in XML format).</p>	
TCNI07	<ul style="list-style-type: none"> <li>Change the web browser URL from <b>/Tachyon</b> to <b>/Core</b></li> </ul>	<p>The expected response is <b>Server Error 403 - Forbidden: Access is denied</b>.</p> <p>For security reasons, access to the these web applications are allowed for local users and services only, and denied to remote devices.</p> <p>If the response is <b>You have reached Tachyon Core API</b> then there is an issue with IIS configuration. Or, you are using a browser on the actual Tachyon Server,</p>	<p><b>i</b> <b>Access Allowed</b></p> <p>It should not be possible for a remote web browser to have access to the following web applications:</p> <ul style="list-style-type: none"> <li>/Core</li> <li>/CoreInternal</li> </ul>

T C N I 08	<ul style="list-style-type: none"> <li>Change the web browser URL from /Tachyon to /<b>CoreInternal</b></li> </ul>	and should do the test on a remote workstation.	<p>If access is possible then it is probable that the IIS role feature <b>IP Address and Domain Restrictions</b> is not installed on the Tachyon Server. This version of the Tachyon Server installer does not check for this prerequisite. You must ensure this IIS feature is installed, as described in the <a href="#">troubleshooting IIS Issues</a> page.</p>
T C N I 09	<ul style="list-style-type: none"> <li>Change the web browser URL from /Tachyon to /<b>Platform</b></li> </ul>	The web browser will take you to the SLA Platform inventory web application.	
T C N I 10	<ul style="list-style-type: none"> <li>Change the web browser URL from /Tachyon to /<b>CatalogWeb</b></li> <li>Change the web browser URL from <b>https</b> to <b>http</b></li> </ul>	<p>When using <b>https</b>, the expected response is <b>Server Error 404 - File or directory not found</b>.</p> <p>When using <b>http</b>, the web browser will take you to the <b>1E Catalog</b> website.</p> <p>The 1E Catalog currently uses only HTTP.</p>	To access the <b>Admins</b> tab in the CatalogWeb, you must manually add one or more administrator accounts or groups to the website configuration. Please refer to <a href="#">1E Catalog 1.2 - Rebuilding the 1E Catalog: Granting administrative privileges</a> .

## Verify user rights assignment

To run the following tests you need:

1. Tachyon Server installed and above [TCNI](#) verification tests passed
2. The name and password for the **server installation account**, the account must also be enabled
3. Two AD User accounts, **Test User 1** and **2**
  - a. must not be existing Tachyon users because they will be assigned specific roles for the purpose of these tests.
  - b. must have email addresses and be able to read emails.
4. The **1E-TachyonPlatform** product pack, if not already installed

1E is often asked why the **1E-TachyonPlatform** product pack is not built into the product. The reason is that uploading a known product pack is part of the verification process and ensures the user is able to upload at least one pack and carry out all the other necessary tasks at least once before exploring other aspects of Tachyon.

Mac	'/Library/Application Support/1E/Tachyon/Agent'										

## Verify Tachyon client-server communications (stage 1 and 2 instructions)

To run the following tests you need:

- Tachyon Server installed and above [TCNI](#) verification tests passed
- At least one test device has Tachyon Agent installed and above [TCNA](#) verification tests passed
- Two AD user accounts configured as Tachyon users and above [TCNU](#) verification tests passed

To run the following tests you need to logon to a workstation with a user account that is assigned to at least one of the Tachyon administration roles.

Ref	Test	Expected Response	Remediation
T C N A 01	See <a href="#">TCNA01</a> above.	Each <b>Test Device</b> is listed in the Tachyon Explorer Devices page.	
T C N A 05	<ul style="list-style-type: none"> <li>Connect to the Tachyon Portal as <b>Test User 1</b></li> <li>Open the <b>Explorer</b> application and go to the <b>Home</b> page</li> <li>Type <b>verification</b></li> <li>Select <b>Tachyon Platform verification stage 1</b></li> <li>Click <b>Ask this question</b></li> </ul>	<p>When the <b>Tachyon Platform verification stage 1</b> question is asked, the Explorer view changes to the <b>Instruction History Responses</b> page.</p> <p>The <b>Instruction History Responses</b> page lists the software products installed on each Test Device.</p> <p>Contents are shown for online Devices that have the Tachyon Agent installed and running.</p> <p>If you view other Explorer pages and want to get back to the <b>Instruction History Responses</b> page, then you should select <b>Instruction History</b> from the navigation menu on the left side, and you should see a list of the instructions that have been run. You may then click on the name of the instruction to view its responses.</p> <p>The Agent log indicates:</p> <ul style="list-style-type: none"> <li>Running instruction</li> <li>Searching for installations with publisher="(any)" and product="(any)"</li> <li>Matched nnn installations</li> <li>Successfully processed instruction</li> </ul>	<p>You may need to refresh the <b>Instruction History Responses</b> page.</p> <p>Verification stage 1 tests communication between the Agent and Switch. Any issues will appear in the Agent log.</p> <p>Check each test device has the Tachyon Agent running and is online.</p>

## Verify extended features

To run the following tests you need:

- all the above tests completed
- to logon to a workstation with a user account that is assigned to at least one of the Tachyon administration roles that allows you to run some instructions, which can include a Verification instruction already used above.
