

User-specific application visibility

Shopping Configuration Manager and non-Configuration Manager applications can be made selectively visible in the Shopping Web Portal to specific users or groups. This enables fine-tuning of application visibility and enhances Shopping's ability to integrate with enterprise scenarios.

The permissions for Configuration Manager and non-Configuration Manager applications can be set on the [Application properties: Permissions](#) tab.

OS deployment applications can have both user-specific and computer-specific visibility applied. As described in [Creating OS Deployment applications](#) this can be done using either of the following methods:

- the **Permissions** screen of the OS Deployment Application wizard
- the **Permissions** tab of the OS Deployment Application Properties dialog.
