

Managing mobile applications

Summary

You can create officially sanctioned apps for your iOS, Android and Windows mobile users – they can shop for these on their mobile devices from the Shopping Web. Shopping acts as a pass-through to the app stores for the particular OS used when browsing to the Shopping Web. Mobile applications cannot be defined with approval. If the user requests a mobile app, they will receive it without any further interaction with Shopping.

Creating non-Configuration Manager applications

To create a new Mobile Application:

1. In the Shopping Admin Console, choose the Applications node.
2. On the right pane, right-click and from the context menu, choose New ConfigMgr Application.

3. In the New Mobile Application wizard:
 - a. On the Welcome screen, click Next.

- b. On the General Details screen, enter the name and description for the application. In our example, we used the YouTube mobile app.

The screenshot shows the 'General Details' screen of the 'Shopping Admin - New Mobile Application Wizard'. The title bar reads 'Shopping Admin - New Mobile Application Wizard'. Below the title, the section is labeled 'General Details' with the instruction 'Enter a name for the Mobile Application and define Properties'. The main content area has a heading 'Select an icon and define the properties of the Mobile Application.' and contains the following fields:

- Name:** A text input field containing 'You Tube'.
- Description:** A text input field containing 'The YouTube app.'
- Properties:** A section with a checked checkbox labeled 'Enabled' and an empty 'Application Ref.' text input field.
- Change Icon...:** A button with a small icon to its left.

At the bottom of the screen, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'.

- c. On the Mobile Details screen, define the URLs to the respective app stores which initiates a download for the app on the user's mobile device when they browse the Shopping Web portal. Click ... to default to that particular app store for the application.

The screenshot shows the 'Mobile Details' screen of the 'Shopping Admin - New Mobile Application Wizard'. The title bar reads 'Shopping Admin - New Mobile Application Wizard'. Below the title, the section is labeled 'Mobile Details' with the instruction 'Browse (...) and select a desired application from app store and click Ok'. The main content area contains three rows, each representing a mobile platform:

- iOS:** A text input field containing 'https://itunes.apple.com/in/app/youtube/id544007664?mt=8' and a button with three dots to its right.
- Android:** A text input field containing 'play.google.com/store/apps/details?id=com.google.android.youtube' and a button with three dots to its right.
- Windows:** A text input field containing 'https://www.microsoft.com/en-us/store/apps/youtube/9wzdncrfj3dl' and a button with three dots to its right.

At the bottom of the screen, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'.

Click Next.

- d. On the User Categories screen, choose the category that determines which users see the application in the Shopping Web portal. In our example, we have not added any user categories yet so by default, the application will be visible in the globally available Miscellaneous user category.

- e. On the Completion screen, click Finish or Back to review your settings.

The new mobile application is displayed in the Mobile section of the Applications node when you save it and is available for download from the Shopping Web.
