

# Server installers

Windows Installer properties for each of the Tachyon server installers.

**Tachyon Setup** is the only supported method of installing a Tachyon Server. Installation using standalone MSI is not supported unless advised by 1E, which may be necessary in complex installations, using non-interactive (quiet) command-lines, and may require post-install configuration steps.

## Tachyon Setup installation order

When installing all components on a single server, Tachyon Setup installs them in the following order:

1. Tachyon Server - **TachyonServer.msi**
2. 1E Catalog - **1ECatalog.msi**
3. SLA Platform - **SLA.Platform.Installer.msi**
4. SLA Business Intelligence - **SLA.BI.Installer.msi** (optional but required for Patch Success)

The installer properties for these MSI are provided in the following pages, including some notes on how Tachyon Setup uses the properties.

- [Tachyon Server installer properties](#)
- [1E Catalog installer properties](#)
- [SLA Platform installer properties](#)
- [SLA Business Intelligence installer properties](#)

## Tachyon Platform zip file

The **TachyonPlatform** zip file can be downloaded from the [1E support portal page \(https://1eportal.force.com\)](https://1eportal.force.com). Extracting the zip will create a folder structure containing the following, where highlighted files are required by Tachyon Setup.

- Licenses.txt
- Tachyon Release Information.html
- **Tachyon.Setup.exe**

- Installers\1ECatalog.msi
- Installers\SLA.BI.Installer.msi
- Installers\SLA.Platform.Installer.msi
- Installers\TachyonCertificateManager.exe
- Installers\TachyonServer.msi
- Installers\TachyonToolkit.msi

- Installers\Apps\Explorer\Explorer.zip
