

Customizing calendar ICS files

Who can do this?

Shopping administrators.

What is it used for?

To add a reminder to the recipient's calendar with details about the OS deployment they requested.

Where is it implemented?

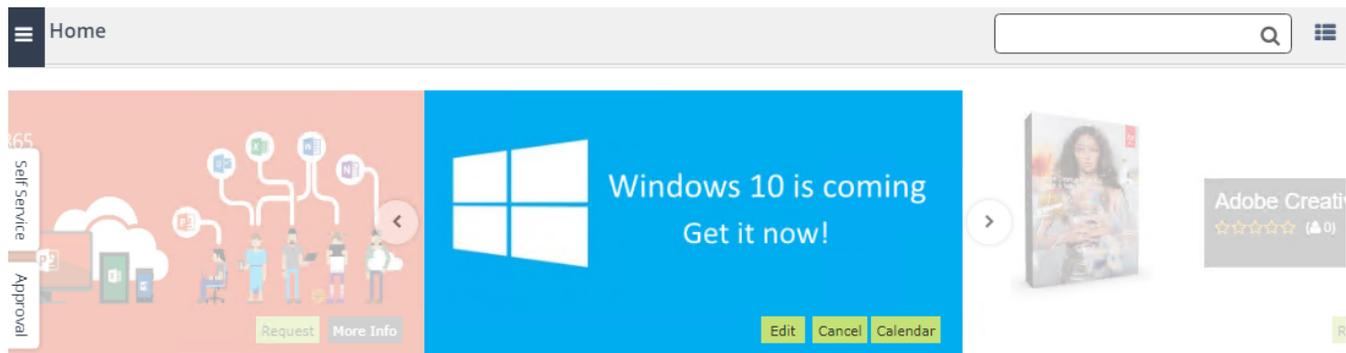

Under the Applications and Settings nodes in the Shopping Admin console

Getting a reminder for the scheduled OS deployment

Users who request a self-service OS deployment can add an event to the calendar in their mail client to remind them of the scheduled OS deployment simply by clicking the Calendar button from the Shopping Web banner. An ICS file is downloaded to their device so that they can add the event to their calendar.

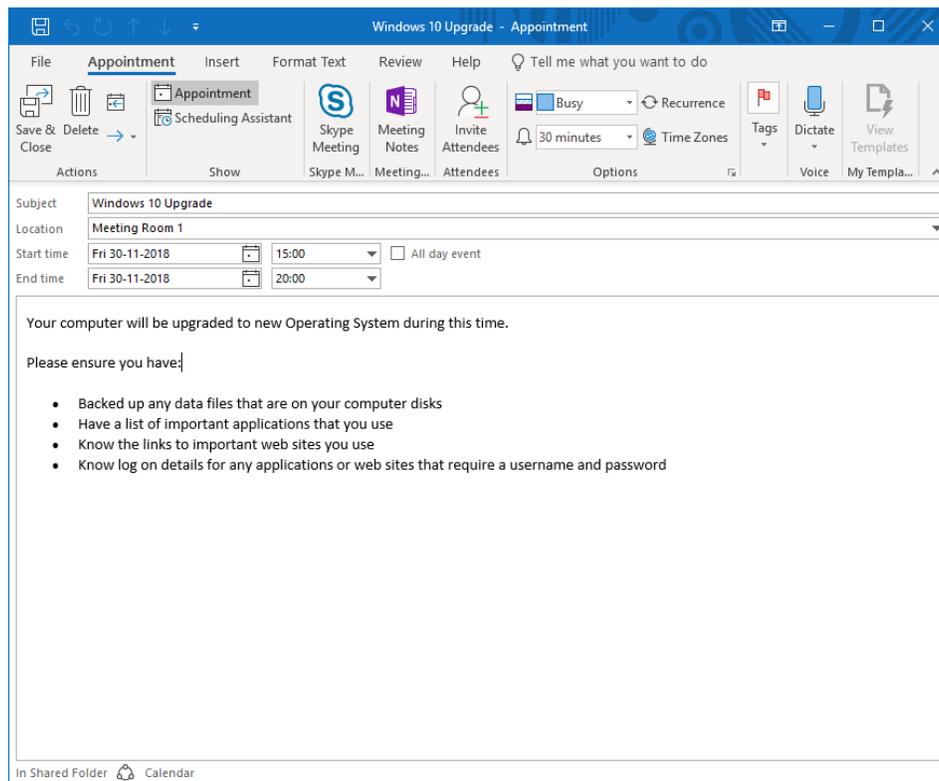

On this page:

- [How to customize the ICS file](#)

How to customize the ICS file

In our example, when the user adds the ICS file to their calendar, they will see this – we will walk you through how the properties for the reminder are populated:

- In the ribbon, the **reminder** is set to display **30 minutes before** the OS deployment takes place. This value is derived from **OS Deployment Calendar Reminder Time** under **Settings** in the **Shopping Admin Console**.
- The **Subject** and **Location** fields picks up the name of the deployment and the location for the deployment from the deployment **Properties dialog**
- The **Start time** fields are dictated by the user when they schedule the deployment
- The **End time** fields are calculated by taking the duration for the deployment in **OS Deployment Calendar Schedule Time Interval** under **Settings** in the **Shopping Admin Console** and appending it to the **Start time** properties
- The body for the reminder is derived from the `OsdMigration-IcsBody.html` file located under `%Program Files%\1E\Shopping\WebSite\ShoppingAPI\GlobalResources`

You can customize the ICS file to suit your circumstances – it is a two-step process:

1. In the **Shopping Admin Console**:
 - a. Update the attributes (name of the deployment and the meeting location) for deployment in the **Applications node**.
 - b. Update the properties (duration the OD migration is expected to take and the time when the event reminder is displayed) for the calendar in the **Settings node**.
2. In `%Program Files%\1E\Shopping\WebSite\ShoppingAPI\GlobalResources` update `OsdMigration-IcsBody.html`.

To customize the ICS file:

1. Open the **Shopping Admin Console**.
 - a. If you want to change the name of the deployment and/or location, under the **Applications node**, locate the deployment you want and double-click it.

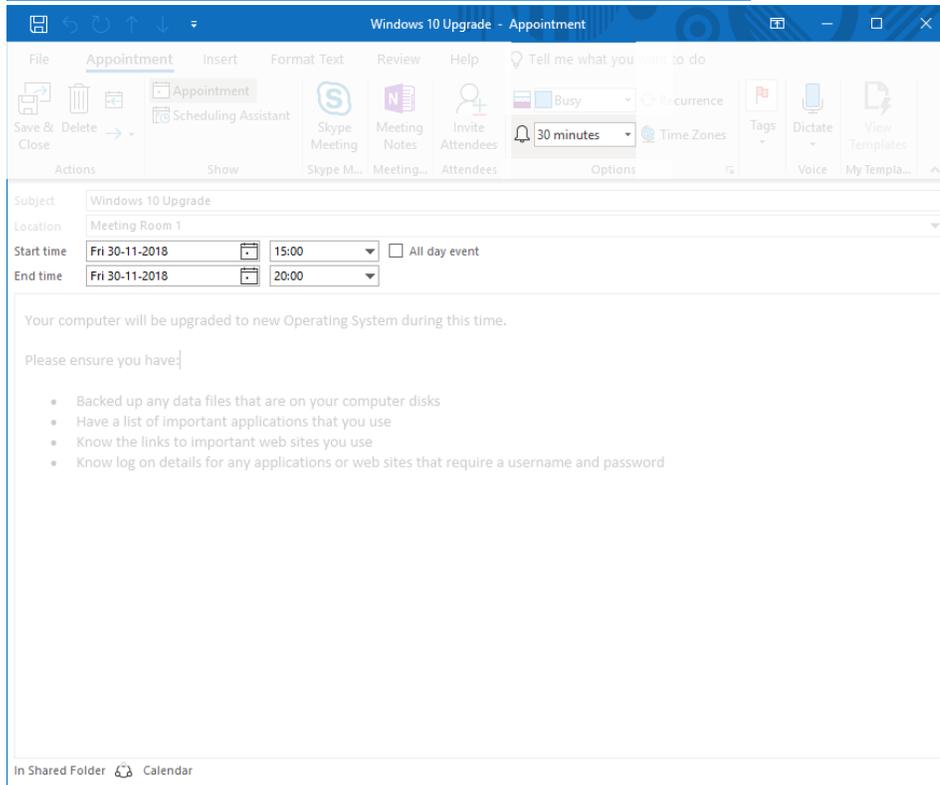

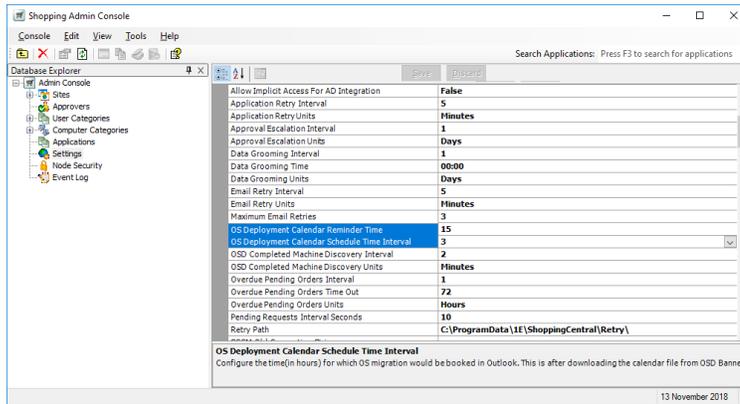

b. On the **General tab** in the OS deployment **Properties dialog**, the two fields of interest are:

The screenshot shows the 'Windows 10 Upgrade - OS Deployment Properties' dialog box with the 'General' tab selected. The 'Name' field contains 'Windows 10 Upgrade'. The 'Description' field is empty. The 'Icon' field shows a folder icon and a 'Change Icon...' button. The 'Cost' field is set to '0.00'. The 'Application Ref.' field is empty. The 'Location for OS Deployment' field is set to 'Meeting Room 1'. There is an unchecked checkbox for 'Disable Applications to Reinstall page on OSD wizard'. At the bottom are 'OK', 'Cancel', and 'Apply' buttons.

The screenshot shows an Outlook appointment window titled 'Windows 10 Upgrade - Appointment'. The subject is 'Windows 10 Upgrade' and the location is 'Meeting Room 1'. The start time is 'Fri 30-11-2018 15:00' and the end time is 'Fri 30-11-2018 20:00'. The appointment body contains the following text: 'Your computer will be upgraded to new Operating System during this time. Please ensure you have:' followed by a bulleted list: 'Backed up any data files that are on your computer disks', 'Have a list of important applications that you use', 'Know the links to important web sites you use', and 'Know log on details for any applications or web sites that require a username and password'. The bottom of the window shows 'In Shared Folder' and 'Calendar'.

- **Name** – the name of the deployment is used as the **Subject** in the reminder
- **Location for OS Deployment** – the location is used as the **Location** for the reminder.

c. If you want to change the duration for the deployment and when the reminder is displayed to the user, under the **Settings node**, the two properties of interest are:

- **OS Deployment Calendar Schedule Time Interval** property – used for the duration for the deployment
 - **OS Deployment Calendar Reminder Time** property – used as a reminder prompt
2. Locate the `OsdMigration-IcsBody.html` file in `%Program Files%\1E\Shopping\WebSite\ShoppingAPI\GlobalResources` and update it's contents to suit your circumstances.

```
<html>
...
<p>Your computer will be upgraded to new Operating System during this time.</p>
<p>Please ensure you have:</p>
<ul>
<li>Backed up any data files that are on your computer disks</li>
<li>Have a list of important applications that you use</li>
<li>Know the links to important web sites you use</li>
<li>Know log on details for any applications or web sites that require a username and password<
/li>
</ul>
