

EPOCHTOJSON

Function	EPOCHTOJSON
Action	Takes a date-time value, expressed as a Unix epoch time in UTC, and returns a JSON-compatible (ISO-8601) string representation of that date-time, also in UTC.
Parameters	(integer) Unix epoch time in numeric form.
Return values	(string) The time as an ISO-8601 string.
Examples	<pre>// Input is 1492761464 == 21 April 2017 07:57:44 UTC // Returns "2017-04-21T07:57:44.000Z" SELECT EPOCHTOJSON(1492761464) AS MyDateTime;</pre>
Notes	<p>This function is useful as all date-times returned by the Tachyon Agent must be in ISO-8601 format to be parsed correctly by the Tachyon Server.</p> <p>See https://www.epochconverter.com/</p> <p>For more examples, see Datetime handling.</p>
