

Peer backup assistant Close Nomad PBA data store

This custom task sequence has been replaced by [Peer backup assistant Finalize Nomad PBA data store](#). Existing deployments will still work but you cannot modify them. Going forward, we recommend using its replacement.

This custom task sequence action closes the connection after user state is saved by USMT Capture User State. The [Peer backup assistant Provision Nomad PBA data store](#) and USMT Capture User State actions must have been run.

Actions	Notes
<p>When run, this task:</p> <ol style="list-style-type: none">1. Sends a completion message to the Nomad peer to indicate that the user state migration data has been cached.2. Sets the following task sequence variables for subsequent actions:<ul style="list-style-type: none">• <code>PBAComputerName</code>: A label used to refer to the cache in following Nomad actions	<p>This task sequence action:</p> <ul style="list-style-type: none">• Is the final action in the saving phase of user state migration
