

Using the NightWatchman console

You run the NightWatchman console from the Start menu and use it to:

- [Configure the group hierarchies](#) to model the physical and logical locations of the computers in your organization and use the [Import wizard to populate the hierarchies automatically](#)
- Define [power schemes](#) and [power policies](#) and [apply](#) them
- [Configure tariffs](#) for energy costs and [power consumption values](#) according to hardware types
- [Manage WakeUp servers](#)
- [Define console security](#)
- Configure [general settings](#) for the NightWatchman Management Center
