

RunUncachedPermittedFastLAN

Determines where the download package is run from under certain conditions.

Registry value	Default value	Notes	Installer property
RunUncachedPermittedFastLAN	0	<p>Works in conjunction with MaxPackageSizeFastLAN (which needs to contain a value greater than zero). Values are:</p> <ul style="list-style-type: none">• 0 – do not run package from the distribution point.• 1 – run package directly from the distribution point if there is either insufficient disk space to create the cache, or the maximum package threshold is exceeded but the connection is fast (>500kbps). <p>To ensure that the un-cached mode works correctly, set the Program Environment Properties to include the Drive mode/Require drive letter option.</p>	PERMITUNCACHED
